Note: All recording stations are located near the seacoast. Rainfall in mountainous areas inland is much greater.

The climate of Vietnam is monsoonal in nature. The monsoon is a seasonal wind of the Indian Ocean and southern Asia blowing from the SW from May to October and from the NE from late October to March, resulting in heavy precipitation, high humidities, maximum cloudiness and tropical temperatures. The Annam mountains lie almost perpendicular to the two monsoonal airflows thus reducing the amount of rain in ICTZ during the SW monsoon. During the NE monsoon in ICTZ a phenomenon called CRACHIN brings widespread low cloudiness, poor visibility and drizzle which significantly affect air operations; cloud is generally 3000-5000 feet thick with its ceiling under 1000 feet, usually under 500 feet.
